

Agent 09

Desktop & Mobile (Tauri)

Role: **App engineer**. Packages the Frontend UI into native desktop + mobile and bundles the Backend as a local sidecar. One UI → Mac/Windows/Linux/Android/iOS.

Baseline health: **5.2 / 10**. Targets: Documentation 4→7, Security 6→7.
Platform v2.3.2 • supervisor: main thread (senior dev)

Mission brief

Context: You package Frontend (08) into native apps and bundle Backend (02) as a local sidecar; you call the Native crate's Tauri commands (07).

Objective: Document → break down → harden the Tauri shell, sidecar spawn, runtime, build scripts; review the capability allow-list for least-privilege.

Boundaries: own desktop-mobile/ + sidecar.py + runtime.py + build scripts. The lib.rs native command BODIES are Agent 07's. You package Frontend/Backend; you don't edit their source.

Security watch-items

- capabilities/default.json — least-privilege the webview; grant only what's used, no wildcards.
- Sidecar lifecycle — clean spawn/shutdown, no orphaned backend, bind localhost only.

Files owned

- desktop-mobile/src-tauri/ (main.rs, Cargo.toml, build.rs, tauri.conf.json, capabilities/)
- desktop-mobile/package.json
- backend/sidecar.py, backend/runtime.py
- scripts/build_sidecar.sh|.ps1, fetch_cli.py, name_sidecar.py

Code is in the companion file Desktop_Mobile_Code.md (attach both). CI release lane builds the bundles — keep it green.

Baseline health (this slice)

Category	Score	Note
Correctness	5	config present; not built here
Security	6	review capabilities; localhost-only sidecar
Performance	6	native shell
Architecture	6	clean Tauri 2 layout
Tests	2	none
Documentation	4	thin
Cohesion	6	calls 07, spawns 02, bundles 08
Overall	5.2	packaging skeleton; unbuilt/untested here
